### **A new look for Humidity Control!**

The VH7200 series of humidity controllers has been specifically designed for controlling commercial humidification and dehumidification equipment within accuracies of +/- 3%. All VH7200 humidity controllers feature a large backlit 2 x 8 character digital display, digital service inputs for local equipment monitoring, outdoor reset capability, remote humidity monitoring capability and "real-text" menu driven onboard configuration utility eliminating the need for additional service tools. Networked enabled models will come shortly featuring BACnet MS/TP, Lontalk, and Wireless Zigbee communication interfaces allowing these humidity controllers to be integrated to virtually any building automation system.
