

FOR IMMEDIATE RELEASE

Geoclimate achieves AHRI ACCL Certification and will be on show at AHR EXPO.

Italy, December 13, 2017 – Chiller manufacturer Geoclimate – on show at AHR Expo 2018 in Chicago, January 22-24, 2018, South Hall Booth 7963 – is very proud to announce that, after achieving the AHRI WCCL certification for water cooled range of chillers at the beginning of this year, they have just achieved the **trusted AHRI Certified® mark**, for the air cooled range of products as an Original Equipment Manufacturer.

Applying to the **ACCL program** (Air-Cooled Water-Chilling Package), Geoclimate's air cooled chiller range has earned the trusted AHRI Certified® mark, with the sole exception of evaporative systems and free cooling series – which are excluded from the certification programme – and **including Circlemiser**, the new ultra-high efficient series of Geoclimate air cooled chillers, **which will be on show at AHR EXPO 2018 in Chicago**.

AHRI certification is worldwide considered to be the major standard and the most trusted source of performance certification for heating, air conditioning, water heating and commercial refrigeration equipment. In fact, although it is not mandatory, AHRI certification is very often a specified requirement by Consulting Engineers, Building Owners and Contractors everywhere, from Australia to the USA.

With AHRI certification (both WCCL and ACCL) customers and end-users are assured that Geoclimate's chillers will perform in accordance with the performance values declared in the technical documentation and in the selection software Geoselectool.

The AHRI Certification of both water cooled and air cooled chillers represents a step forward in the Geoclimate's international growth, recently strengthened with the establishment of **Geoclimate USA, the first Geoclimate sales office in the USA, located in Dallas, Texas**.

###

***Geoclimate** is an Italian company with more than 20 years of experience in the HVAC sector, specialized in the design and production of non-standard chillers for applications in air conditioning and refrigeration systems, with particular attention to quality and the environment.*

Established in 1994 in Italy, Geoclimate has continued to expand worldwide and it is now present in Italy, Russia, Thailand, Australia and in the USA. Geoclimate group also includes companies specialized in production of AHUs, heat exchangers and flanges. This presence in different countries and in different areas of HVAC makes it possible for Geoclimate to provide complete service and turnkey solutions.
