### **Bard Manufacturing Introduces MEGA-TEC™ Wall-Mount Air Conditioner**

*Launch Signals Expansion into New Market and Continued Commitment to Innovation*

**BRYAN, OH, January 10, 2019**—The Bard Manufacturing Company introduced its MEGA-TEC™ Wall-Mount Air Conditioner today, a multi-stage, high-capacity sensible cooling SPVU (single package vertical unit) system with exceptional efficiency for industrial-grade cooling. **(AHR Expo), (Booth #B3531).**

The launch positions Bard to address the needs of high heat-load facilities operating in high-durability industrial settings. The AHRI-certified MEGA-TEC meets these challenges while also satisfying the current Department of Energy minimum efficiency mandate of 10EER, in addition to state and national codes. The new units are also IECC2015 compliant; MEGA-TEC's Copeland Scroll compressors can step down to less than 35% of the unit's maximum capacity.

"The MEGA-TEC Wall-Mount Air Conditioner is a direct result of market demand for a unit that delivers industrial-grade cooling with optimal efficiency, but is sized as a slide-in replacement for existing SPVU HVAC systems," said Paul Quigley, senior vice president of sales and marketing. "As a leading industry innovator, we are committed to leveraging the latest technology to exceed our customer's needs."

As an added efficiency opportunity, the MEGA-TEC's optional economizer can provide "free cooling" by using outdoor air to cool an area within a facility when outdoor conditions are favorable. MEGA-TEC also incorporates patent-pending Balanced Climate™ from Bard technology, enabling control of both temperature and humidity. And, leveraging Bard's exclusive programming for PLC (Programmable Logic Control) technology maximizes control for customers who can manage up to fourteen units remotely with a single controller.

Units are available first quarter 2019 through Bard distribution partners.

## About Bard Manufacturing

The Bard Manufacturing Company has developed advanced technologies and innovations in the HVAC industry for more than 100 years. We are the industry's leading innovator of wall-mount air conditioning and heat-pump technology. Founded as a heating and plumbing contracting business in 1914 by Dale Bard, the company remains family-owned four generations later.

Bard is committed to the highest quality in the engineering and manufacturing of climate control solutions. We strive for continuous improvement, testing each unit individually before it is shipped. Bard serves many markets including schools, equipment shelters and telecom, modular, light commercial and mobile, and residential.

Our corporate offices are located in Bryan, Ohio. In 2018, Bard opened its *James R. Bard Center for HVAC Innovation & Design* to improve new product development and speed-to-market capabilities, and to help make northwest Ohio a hub for HVAC engineering and innovation. An additional wall-mount manufacturing facility is in Madison, Georgia, and a coil production plant is located in Saltillo, Mexico. These modern, state-of-the art facilities allow Bard to deliver innovative, high-quality products to an ever-expanding global marketplace.

We pride ourselves on providing reliable technical service and customer support in a responsive, friendly manner. Our rich history in Bryan, Ohio, and our commitment to our community continue to this day.
