### **Pre-Engineered Boiler Skid Systems Add Value, Ensure System Reliability**

**ATLANTA (Jan. 11, 2019)** – Facilities today seek reliability, safety and sustainability in their capital equipment purchases. One way Cleaver-Brooks is meeting this need is by offering a complete line of pre-engineered [skid-mounted boiler solutions](#), pre-piped and ready for start-up.

“We know that a skid-mounted system in one size cannot meet every need,” said Sean Lobdell, director of sales for Packaged Boiler at Cleaver-Brooks. “That is why we have engineered and designed our skid-mounted solutions to be adaptable, even though they are pre-engineered and assembled to provide the lowest cost of installation and ownership.”

For every skid system, Cleaver-Brooks utilizes 3-D modeling to ensure a space-saving layout while maintaining serviceability, optimal performance and customer satisfaction. In addition, every Cleaver-Brooks boiler system is fully tested at the factory to ensure efficient and reliable operation in the field.

Pre-engineered skid systems save installation time. “If a facility engages a mechanical contractor to assemble the skid, they have to wait for the boiler components to arrive before installation can get underway,” added Lobdell. “Our system is pre-piped and pre-wired, so a facility can be operational weeks faster.”

Cleaver-Brooks offers pre-engineered hydronic skid solutions for gas-fired, condensing boiler systems ranging in size from 500 to 12,000 MBH capacity using the ClearFire-CE model. Custom hot water boiler skids are available in a wide range of capacities to meet other system needs. Up to six boilers can be combined in a pre-engineered system, and additional boilers can be added as a custom-engineered solution.

Cleaver-Brooks also offers skid systems for its broad range of electric, firetube and flexible watertube boilers.

Every Cleaver-Brooks pre-engineered skid system includes the boiler, system pumps, air separator and expansion tank. Optional items include a chemical pot feeder and glycol fill station. Accessories only skids are also available for maximum design and installation flexibility. Cleaver-Brooks has a dedicated alliance of factory-trained representatives who can be contacted for consultation, sales, maintenance and aftermarket support. To locate a representative, visit [cleaverbrooks.com](http://cleaverbrooks.com) or call (800) 250-5883.

#### **About Cleaver-Brooks**

Cleaver-Brooks, a world-renowned provider of boiler room products and systems, is committed to providing efficient solutions that help its customers and the industry reduce energy usage, cost

and environmental impact. As the pioneer of packaged firetube and watertube boilers, Cleaver-Brooks is the only manufacturer in the world to offer an entirely integrated boiler room solution for any size application. Its products are backed by a world-class representative network offering superior aftermarket service and solutions. Visit [cleaverbrooks.com](http://cleaverbrooks.com) for more information.
