

Rinnai Launches New I-Series Boiler for Residential Market

PEACHTREE CITY, Ga. (January 14, 2019) – [Rinnai Corporation](#), manufacturer of the number-one selling brand of tankless gas water heaters in North America, is launching its new I-Series Boiler for the residential market.

In 2018 Rinnai launched its M-Series boiler, which offers many benefits to installers such as a compact design, easy installation and ease of service. This year, Rinnai is expanding its presence in the North American boiler market with the new I-Series Boiler launch.

The I-Series Boiler has a unique advantage to homeowners with the ability for simultaneous usage of home heating and domestic hot water production. That means, if the heat is running and someone in the home wants to take a shower, the heat is not interrupted as it is with many traditional boilers in existing homes. The technology also includes an innovative bypass servo valve, which enables precise control of the hot water temperature.

This boiler is available in both combi and heat-only models and comes standard with multi-zone heating control.

As with Rinnai's number-one selling tankless water heaters, the company manufactures many of the key components and utilizes high-quality materials. This further enables Rinnai to maintain control of the quality of the product, which the Rinnai brand is known for in the market.

"From a global perspective, Rinnai is a leader in the boiler category and has proven success in the market," said Frank Windsor, President, Rinnai America Corporation. "With the launch of the new I-Series Boiler, Rinnai is further expanding its boiler presence in the North American Market. We will continue to drive innovation and category growth in this market as we have done with tankless water heating, all while staying true to our vision 'enhancing lives by changing the way water is heated.'"

The new I-Series Boiler will be available for ordering in the spring of 2019, well in advance of the start of the heating season.
