FOR IMMEDIATE RELEASE
January 4, 2019

RGF Environmental Group's Microcon[®] 350/675 whole home HEPA filter adds to RGF's IAQ lineup for AHR

Riviera Beach, Florida (January 4, 2019) – RGF Environmental Group, a leading manufacturer of air, water, and food purification systems positions themselves as the comprehensive source for indoor air quality (IAQ) solutions. Exhibiting at the AHR Expo in Atlanta from January 14-16, RGF will be releasing their new whole home, fan powered HEPA filter to their impressive lineup of innovative IAQ solutions.

RGF's new Microcon[®] whole home HEPA filters can be installed into any existing commercial or residential HVAC system to provide 99.97% airborne particulate reduction without impacting air flow, static pressure or unit sizing. Installation requires no costly electrical or mechanical alternations to the HVAC system and the unique design offers HEPA grade filtration with very low power consumption.

"We're seeing the IAQ market really trending up this year," said Mat Charles, Vice President of National Air Products. "Contractors have found that when the summer sales dip, shifting focus from cooling air to cleaning air benefits both their customers as well as their business."

In addition to the Microcon[®] whole home HEPA system, RGF's booth will also feature the Gold Dealer Design award-winning and best-selling REME HALO[®] and the new evolution of in-duct air purifiers, the REME HALO ECHO[®].

RGF will showcase these products and more at the AHR Expo, the world's largest HVACR event (Exhibit Hall B, Booth # B561). The show will be held January 14-16, 2019 at the Georgia World Congress Center in Atlanta, Georgia, USA.
