

RINNAI LAUNCHES DEMAND DUO 2 HYBRID COMMERCIAL WATER HEATING SYSTEM

PEACHTREE CITY, Ga. – [Rinnai Corporation](#), manufacturer of the number-one selling brand of tankless gas water heaters in North America, announces an exciting new addition to its commercial water heating lineup – the [Demand Duo™ 2 Hybrid Water Heating System](#).

Building off the success of its current line of commercial products, the Demand Duo 2 combines the hybrid technology of the Demand Duo product family with the redundancy and performance of its commercial rack systems. The system features a 119-gallon storage tank along with two CU199 Rinnai Tankless Water Heaters with freestanding rack that work together to offer the best benefits of both tank and tankless technology. The 119-gallon storage tank offers built-in redundancy and storage for high spike draws – eliminating the need to purchase multiple tank water heaters.

“We’ve already seen a huge amount of success with the Demand Duo line,” said Dale Schmitz, Marketing Manager at Rinnai America Corporation. “The great thing that the Demand Duo 2 does for us is that it allows us to scale up that technology and offer a solution that works for commercial customers who have higher hot water demands.”

Featuring Rinnai’s DuoSmart Tank Technology with pre-installed recovery pump, controller and electrical junction box, the Demand Duo 2 ensures reliability and maintains consistent temperature with lower acquisition, operating and life cycle costs.

In addition to its built-in redundancy and strong performance, Demand Duo 2 offers longer life, lower operating costs, easier serviceability and maintenance, a longer warranty and better technology. The system is also lighter and takes up less space than competitive products, requires no ASME certification or inspections and has the most venting options in the industry.

The Demand Duo 2 Hybrid Water Heating System is now available for order.
