Phoenix, Arizona – February 3, 2020: Azbil North America, Inc is proud to introduce VorTek Instruments’, an Azbil group Company, new SonoPro® Commercial Series and SonoPro® Water Series of ultrasonic flowmeters with high accuracy transit-time ultrasonic technology that deliver accurate and reliable flow metering. The innovative design incorporates matched precision transducers and signal processing circuitry to accurately measure the flow of most liquids over a wide range of velocities. SonoPro® meters are available with clamp-on or insertion transducers. Clamp-on meters have no wear, create zero pressure loss and do not require process interruptions to install them since they are attached to the outside of the pipe. The insertable version can be installed on any piping and can read the flow rate of any fluid with little to no conductivity such as hydrocarbons. SonoPro® meter can be appropriate for many measurement applications, including industrial water flow, municipal water, oil, chemical, and agricultural flow. With the addition of external temperature inputs, SonoPro® can provide both mass and energy (BTU) metering.

While exhibiting at the 2020 AHR Expo, Azbil North America is also showcasing Actival +™ high-performance control valves that include temperature and pressure sensors, flow meter, and energy measurement functionality in a small, lightweight valve and actuator integrated unit. Combined with the full of line of screwed-end, flange, and spring return Actival ™ line of high-performance control valves, the Actival +™ ensures maximum energy efficiency and cost savings In HVAC operations.

Also featured is VorTek Instruments’ multivariable inline and insertion vortex flowmeters that deliver mass flow, temperature, pressure, and density readings from a single installed device and reduces initial cost, installation cost and cost-of-ownership over the lifetime of the instrument. The Pro-V™ series of vortex meter is a game-changer in the mass flow measurement of saturated steam and energy consumption calculations.

Azbil has been actively engaged in creating the most comfortable indoor, commercial, and factory for over one hundred years. Azbil North America’s Actival ™ lineup of control valves and the SonoPro® ultrasonic flow meters and Pro-V™ multivariable vortex meters represent our rich experience in the market. Please give us a call or contact one of our representatives to discuss your HVAC application(s) or building automation needs.

About Azbil: Azbil North America, Inc. is an overseas affiliate of the Azbil Corporation and has been serving a wide range of industries in North America with automation and control products since 1996. VorTek Instruments is an Azbil group company. Our commitment is to realize safety, comfort, and fulfillment in people’s lives and contribute to the global environment through “human-centered automation.”
